Last Chance to Register for the Trade Mission to Thailand and Vietnam!
Deadline to register is August 31, 2022

For more information and registration contact Linda Foerster
ACCELERATE YOUR EXPORT SALES

Please join the Conference of Great Lakes St. Lawrence Governors & Premiers trade mission to South Africa and Kenya, February 13-17, 2023. Each mission participant will receive a customized schedule of B2B meetings with prospective customers and business partners. Mission participants will also benefit from networking events and logistical support provided by the GSGP Africa Trade Office. Optional group safari, at own cost, prior to the start of the trade mission.

WHY SOUTH AFRICA AND KENYA?

- There has been significant US export growth to South Africa and Kenya through May of this year, up 17% and 46% respectively.

- Top Great Lakes export categories to South Africa include industrial machinery (up 35%), mineral fuels (up 19%), and electrical machinery (up 29%). Top categories for Kenya include mineral fuels (up 2116%), aircraft and parts (up 133%), and pharmaceutical products (up 99%).

- Great Lakes region companies should consider South Africa’s geographic advantages, logistics infrastructure, widespread use of the English language, and relatively transparent legal processes.

- U.S. and Canadian companies should consider doing business in Kenya as it is a market-based economy, is considered to be the economic, commercial, financial, and logistics hub of East Africa, and there is a young, growing and educated English-speaking population with a high fluency in technology, according to the International Trade Administration.

COSTS Participation Fee: US $1,500 per person (each additional participant US $500)
Market Research & Customized Appointment Setting Fee*: South Africa US $2,700Kenya US $2,700

*Grant funding is available in many states to offset mission costs and travel fees. In some states, the market research and customized appointment fee are complimentary.

Deadline for Registration: December 1, 2022

More information on the mission can be found here

Contact: Zoe Munro, Program Director
WASHINGTON, D.C. – Today, the Commerce Department’s Bureau of Industry and Security (BIS) issued an interim final rule that establishes new export controls on four technologies that meet the criteria for emerging and foundational technologies under Section 1758 of the Export Control Reform Act (ECRA) and are essential to the national security of the United States. These Section 1758 technologies support the production of advanced semiconductors and gas turbine engines. These four technologies are among the items that the 42 Participating States of the Wassenaar Arrangement reached consensus to control at the December 2021 Plenary. The United States additionally controls a wider range of technologies, including additional equipment, software, and technology used to produce semiconductors, beyond the items agreed upon in the Wassenaar Arrangement.

“Technological advancements that allow technologies like semiconductors and engines to operate faster, more efficiently, longer, and in more severe conditions can be game changers in both the commercial and military context,” said Under Secretary of Commerce for Industry and Security Alan Estevez. “When we recognize the risks as well as the benefits, and act in concert with our international partners, we can ensure that our shared security objectives are met, innovation is supported, and companies across the globe operate on a level playing field.”

“Global commerce is driven by innovation—new ideas, and novel ways to apply old ones. BIS is vigilant in assessing the development of new technology and whether it may be used for civil and military purposes,” said Assistant Secretary of Commerce for Export Administration Thea D. Rozman Kendler. “We are protecting the four technologies identified in today’s rule from nefarious end use by applying controls through a multilateral regime. This rule demonstrates our continued commitment to imposing export controls together with our international partners. Export controls are most effective when multilaterally imposed.”

The four technologies covered by today’s rule include two substrates of ultra-wide bandgap semiconductors: Gallium Oxide (Gao3), and diamond; Electronic Computer-Aided Design (ECAD) software specially designed for the development of integrated circuits with Gate-AllAround Field-Effect Transistor (GAAFET) structure; and Pressure Gain Combustion (PGC) technology.
